Teamwork Answering Special

Requirements Of People

PLAYGROUNDS by TASROP

PLAYGROUNDS by TASROP are carefully designed by Robert Miller, a Certified Playground Safety Inspector (CPSI); certified by the National Recreation and Parks Association (NRPA) and the Consumer Products Safety Commission (CPSC), under the auspices of the National Playground Safety Institute (NPSI).

The warranty on our playground products is for the **Lifetime** of the structural portion of the playground where installed, against structural failure due to rust through or workmanship. The plastics carry a 15 year warranty and the wagons and trikes carry a 2 year warranty against normal breakage due to composite failure or workmanship.

We guarantee all of the playground equipment that we manufacture and install to meet or exceed all Consumer Product Safety Commission standards as described in the Handbook for Public Playground Safety. We follow ASTM guidelines of ASTM F1487-05 (except sections 7.1.1, 10 and 12.6.1 [unless the targeted user is Physically Challenged, in which case we design to that realm with full intent to adhere to those guidelines]). We also strictly adhere to Colorado and National Recreation and Parks Association (NRPA) guidelines.

We are **fully insured** and will name the school district or other entity as co-insured in provided certificate. We have staff available for any questions that might arise. We are the manufacturer and support our playground systems and that of others. References have been given in the brochure and we ask you to “**See For Yourself**”.

Public Playground Safety Checklist

- 1** Make sure **surfaces** around playground equipment have at least 12 inches wood chips, mulch, sand, or pea gravel, or are mats made of safety-tested rubber or rubber-like materials.
- 2** Check that protective **surfacing extends** at least 6 feet in all directions from play equipment. For swings, be sure surfacing extends, in back and front, twice the height of the suspending bar.
- 3** Make sure play structures more than 30 inches high are **spaced** at least 9 feet apart.
- 4** Check for **dangerous hardware**, like open "S" hooks or protruding bolt ends
- 5** Make sure **spaces** that could trap children, such as openings in guardrails or between ladder rungs, measure less than 3.5 inches or more than 9 inches.
- 6** Check for **sharp points or edges** in equipment.
- 7** Look out for **tripping hazards**, like exposed concrete footings, tree stumps, and rocks.
- 8** Make sure elevated surfaces, like platforms and ramps, have **guardrails** to prevent falls.
- 9** Check **playgrounds regularly** to see that equipment and surfacing are in good condition.
- 10** Carefully **supervise children** on playgrounds to make sure they're safe.
